About

Hi, I'm Sergey and I'm a web-developer. I am really in love with web technologies and services.

Primary language is PHP but also I have well experience with JavaScript using libraries React, ReactNative. I have developed server applications using frameworks such as Laravel, Yii2, Slim. Also I have developed websites using differenct CMS such as WordPress, MODx, Drupal but most of all I love WordPress.

Another passion is development and deployment automatization. I have deployed a number of applications from scratch on DigitalOcean and AWS infrastructures.
I work with Terraform to automate and to speed up any kind of service deployment. I use Fastlane to automate mobile builds and to deliver staging versions.

I love Docker, just love. If there any chance to apply it to help with software development & code delivery - I do it.

Skills

Languages

- PHP, JavaScript, HTML/CSS (HTML5/CSS3), ActionScript 3

Frameworks & Libraries

- Laravel (Lumen), Slim, Yii2, WordPress, React, ReactNative, jQuery, Bootstrap

Other

- Unix, Git, Vagrant, Docker, Forge, Envoy, Terraform, Travis CI
